Introducing new referents

A corpus-based cross-linguistic perspective

Stefan Schnell

University of Bamberg / ARC CoEDL

26 August 2020

v1.0

Geoffrey Haig

University of Bamberg

Nils Norman Schiborr

University of Bamberg

Maria Carina Vollmer

Discourse coherence

- ◆ psycholinguistic and corpus-based research has focused on **discourse coherence**:
tracking and manipulation of shared referents
- ◆ *production* — choice of different anaphoric devices
(Kibrik 2011; Kibrik et al. 2016; Torres Cacoullos & Travis 2019; Schiborr, In prep.; etc.)
- ◆ *processing* — anaphora resolution
(Kehler 2002; Sauermann & Gagarina 2017; Holler & Suckow 2016; etc.)

- ◆ comparatively less attention on
the **introduction of new referents** into discourse

Accessibility and activation

- ◆ most research on new information is rooted in the **functional/typological tradition**
- ◆ usually involves some notion of **accessibility** or **activation**
(Chafe 1976; Fox 1987; Lambrecht 1994; Givón 1983; Du Bois 1987; Ariel 1990, etc.)

Cognitively challenging

- ◆ new referents are understood to present a **cognitive challenge** for discourse participants
- ◆ *production* — introductions are heavier
- ◆ *perception* — increased competition between referents
- ◆ **hence:**
 - Chafe's (1976) “one new concept at a time” constraint
 - Du Bois' (1987) quantity constraint

Syntactic adaptation

- ◆ key claim:
syntax adapts to the challenge of introducing new referents
- ◆ Lambrecht (1994):
principle of the separation of role and reference (PSRR)
(see also Payne 1992)
- ◆ Du Bois (1987):
subjects of intransitive verbs with vague semantics
as entry-points for new referents
- ◆ Dixon (1987):
specialized syntactic constructions (e.g. presentationals)
for new referents

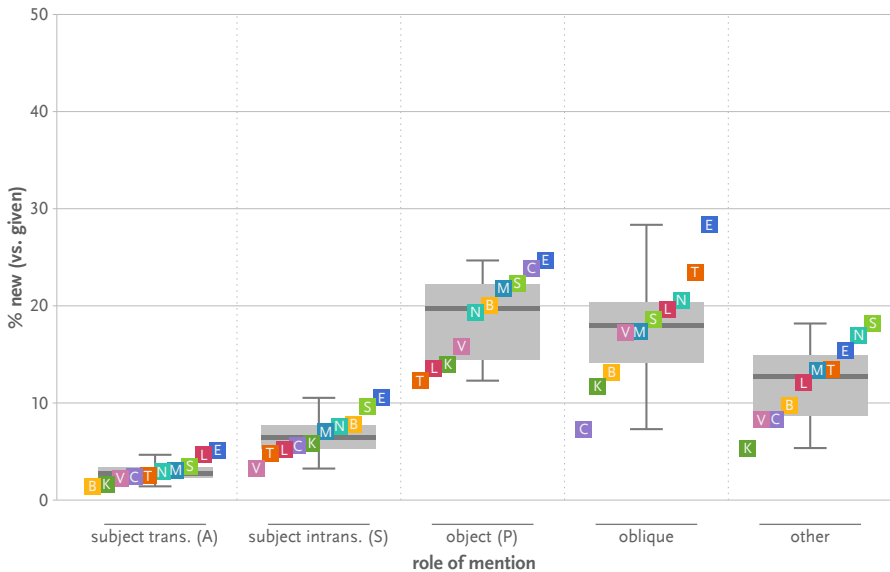

| This study

- ◆ here, we test these predictions systematically, based on the analysis of
 - A. uniformly annotated, spoken corpora from 10 languages**
(Multi-CAST, Haig & Schnell 2020;
accessible online at multicast.aspra.uni-bamberg.de)
 - B. introductions in Pear Story retellings from 4 languages**
(cf. Chafe 1980;
watch film at youtube.com/watch?v=bRNSTxTpG7U)

Preferred syntactic positions

PART 1a

- ◆ **preferred morphosyntactic strategies for referent introduction:**
evidence from Multi-CAST

C C. Greek M Mandarin K N. Kurdish B Tabasaran L Tulil
E English N Nafsan S S. Dargwa T Teop V Vera'a

Preferred syntactic positions

- ◆ **little support for preferred status of intransitive subjects (S)**
- ◆ **instead:**
 - non-subject roles, especially objects (P),**
 - have highest proportions of new mentions**

Preferred syntactic positions

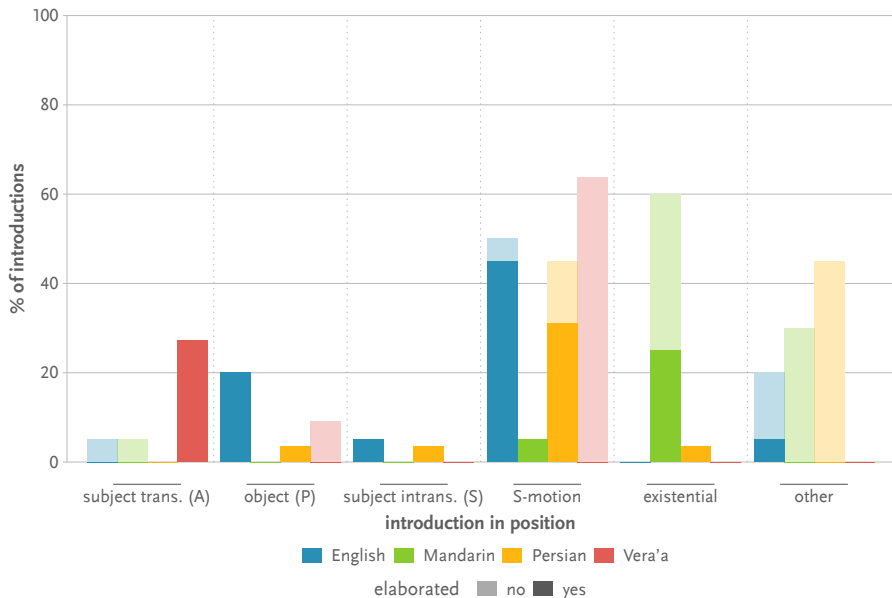

PART 1b

- ◆ **preferred morphosyntactic strategies for referent introduction:**
evidence from Pear Story retellings

(A) man picking pears

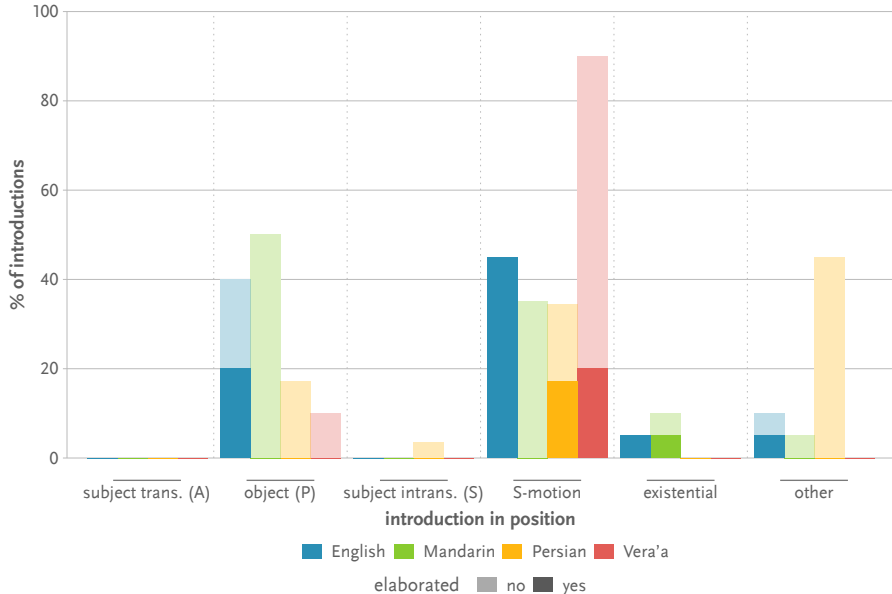

(B) man leading goat

(C) boy stealing fruit

(D) girl riding bike

(E) three boys

Preferred syntactic positions

- ◆ **introductions in S fairly frequent** in Pear Stories, especially with **motion predicates**
- ◆ often **semantically enriched**, e.g. by further adjuncts (*a boy on a bike*, *a man leading a goat*)

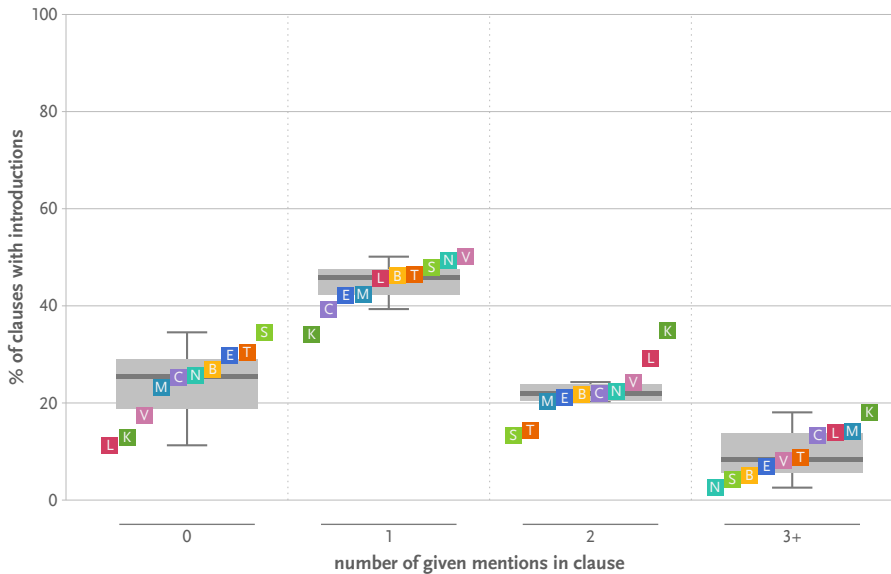

Presentational constructions

- ◆ **dedicated presentational constructions confined to specific local contexts**
e.g. at the beginning of a text or scene
- ◆ elsewhere not common,
with the exception of Mandarin
- ◆ possible other motivations:
“out of the blue” appearances
(cf. Chafe 1980; Du Bois 2004a, b)

Separation of new information

PART 2

- ◆ **separation of new information from general content advancement:**
evidence from Multi-CAST

C C. Greek M Mandarin K N. Kurdish B Tabasaran L Tulil
E English N Nafsan S S. Dargwa T Teop V Vera'a

Separation of new information

- ◆ **little evidence for the separation of introductions from the flow of narrative content**
i.e. most introductions not focused on
through **structural or semantic isolation**
- ◆ **instead:**
most introductions accompanied by given referents in the same clause

Linking new information

- ◆ how come P sticks out as a locus for new information?
- ◆ hypothesis:
transitive constructions provide a structural scaffold for linking new referents (in P) to already established ones (in A)
- ◆ other types of linking:
predicates of perception,
possessive constructions

PART 3

- ◆ **(intransitive) predicates used for introductions tend to be semantically void:**
evidence from Multi-CAST

Semantically void predicates

- ◆ intransitive predicates involved in introductions are **not obviously semantically void**
- ◆ state predicates only account for between a fifth and a third of all introductions:
more than motion predicates,
but much fewer than change-of-state transitives
- ◆ **by far the most frequent predicate types are transitive**
- ◆ intransitives often motion events,
and often semantically enriched

No specialization

- ◆ **high frequency of introductions in object and other non-subject positions**
- ◆ otherwise no obvious generalization
re: special status of any role or predicate type
- ◆ instead:
variation between text types (Multi-CAST vs. Pear Stories) and between languages

Integration

- ◆ **interlocutors focus on conceptual content and states of affairs**
- ◆ **new information is seamlessly integrated into the narrative flow**
(with possible exception of major episodic breaks)

Role profiles

- ◆ **introductions in A are avoided**
due to the convergence of humanness and topicality
(Haig & Schnell 2016; Schnell et al. to appear; Haig et al. 2020)
- ◆ **S is semantically broad**
and overall very frequent, but not specifically
associated with introductions
- ◆ **P and non-subject roles**
are naturally associated with semantic roles
that link to new information (e.g. perception, creation)

Cognitive demands of introductions

- ◆ whether introductions are cognitively more demanding cannot be conclusively surmised from our results
- ◆ **referent introduction may be potentially challenging, but this need not be reflected in linguistic structure**
- ◆ introductions are much rarer than given mentions (1 in 10)
- ◆ possible exception are transitive constructions, but here solution is not to separate, but to link

Cognitive demands of introductions

- ◆ are **introductions** actually more demanding than keeping track of **old information**?
- ◆ **for the speaker, new information is not actually new**
- ◆ inverse perspective:
given information easier to deal with than new
- ◆ notion of challenging introductions
thus consequence of focus on scene-setting contexts

Summary: Referent introduction

- ◆ **referent introduction is less disruptive to syntax than has been claimed**
(Lambrecht 1994; Payne 1992; Du Bois 1987; Dixon 1987)
- ◆ we have found little evidence for
 - ◆ the separation of new information from content advancement;
 - ◆ the isolation of new information in intransitive constructions; and
 - ◆ the association of new information with vague verb semantics
- ◆ use of presentational constructions common at episode breaks, but not limited to new referents (Abbott 1992, 1993)

Summary: Referent introduction

- ◆ instead:
referent introduction is primarily content-driven
- ◆ **speakers seamlessly integrate new information into existing syntactic schemas,**
without recourse to specialized constructions
- ◆ our findings also cast doubt on the claim that referent introduction is **cognitively demanding**
(or at least more than other aspects of discourse)

APPENDICES

Multi-CAST: The corpora

- ◆ non-elicited, monologic spoken narratives
from the **Multi-CAST collection** (Haig & Schnell 2020)

Cypriot Greek	Indo-European, Greek	(Hadjidas & Vollmer 2015)
English	Indo-European, Germanic	(Schiborr 2015)
Mandarin	Sino-Tibetan, Sinitic	(Vollmer 2020)
Nafsan	Austronesian, Oceanic	(Thieberger & Brickell 2019)
Northern Kurdish	Indo-European, Iranian	(Haig et al. 2019)
Sanzhi Dargwa	Nakh-Daghest., Dargwa	(Forker & Schiborr 2019)
Tabasaran	Nakh-Daghest., Lezgian	(Bogomolova & Schiborr, In prep.)
Teop	Austronesian, Oceanic	(Mosel & Schnell 2015)
Tulil	Papuan, Taulil-Butam	(Meng 2019)
Vera'a	Austronesian, Oceanic	(Schnell 2015)

Multi-CAST: Annotations

- ◆ the corpora have been **annotated** for
 - ◆ the **form** and **role** of referring expressions, (with **GRAID**, Haig & Schnell 2014)
 - ◆ **co-reference relations** between mentions (with **RefIND**, Schiborr et al. 2018), and
 - ◆ **semantic predicate types** (with **PredSem**, Haig et al. In prep.)

Multi-CAST: The sample

◆ corpus	clause units	sampled referents	sampled mentions
Cypriot Greek	1 071	165	1 665
English	4 184	918	5 380
Mandarin	1 194	198	1 641
Nafsan	1 012	172	1 393
Northern Kurdish	1 359	181	2 420
Sanzhi Dargwa	1 066	178	1 284
Tabasaran	1 386	190	2 016
Teop	1 302	143	1 620
Tulil	1 264	230	2 111
Vera'a	3 608	428	5 347
totals	17 446	2 803	24 877

Multi-CAST

Multilingual Corpus of Annotated Spoken Texts

`multicast.aspra.uni-bamberg.de/`

◆ narrative retellings of the **Pear Film** (see Chafe 1980)

English	Indo-European, Greek	20 texts	(from Chafe 1980)
Mandarin	Sino-Tibetan, Sinitic	20 texts	(from Erbaugh 2001)
Persian	Indo-European, Iranian	29 texts	(from Adibifar 2016)
Vera'a	Austronesian, Oceanic	12 texts
